

With AVE aluminium enhances the hi-tech system soul

AVE S44 aluminium designs emphasizes switches, video intercom stations and home automation supervisors through aesthetically coordinated solutions that accentuate every technological choice.

Innovation for AVE represents technology, but also aesthetic. This is a cornerstone of all Company production, a quality and prestige symbol of "Made in Italy" that is reconfirmed by the **AVE S44 aluminium collections**. Their material elegance is combined with refined front plates that enhance **electrical, home automation and video intercom systems**, offering a unique standard - for quality and aesthetics.

To emphasize the **electrical system**, AVE offers several aluminium designs, starting with the innovative **New Style 44 collection**, where the advanced AVE toggle switches match with natural or anthracite aluminium front plates. Available in **Multi-Touch** version (with up to six independent controls), **Allumia Touch** is instead the series of aluminium front plates (both for traditional and home automation systems) that makes "invisible" switches, hidden behind an elegant horizontal black strip from whose back shines a delicate blue led light. The aluminium solution with **sliding front plate for power outlet** is also innovative, guaranteeing greater safety - especially for children. Also in this case, from the back of the plate, soft blue LED reveals the luminous symbol of the plug, ensuring maximum recognition during the night. To complete the system, AVE proposes **Allumia 44** wiring accessories series, which includes a complete shiny grey/silver range of traditional scratch-proof and anti-fingerprint switches, sockets, thermostats and many modular built-in elements.

For a perfect aesthetic coordination among the systems, both the **home automation Touch Screen supervisors** and the newly created **video intercom** range approach the elegance of aluminium to emphasize the integrated technology. In addition to the multiple integrations and smart features that make unique **AVE proposal**, it also stands out for its aesthetic connotation. The innovative "**Viva-Voce**" **Touch Screen**, **the largest video-intercom station in its category**, is an example: its refined design with bi-material structure **in aluminium and glass** is an added value for installation opportunities, giving the home **a modern and hyper-technological mood**. And it's precisely on the basis of these concept that AVE has also designed its outdoor video intercom range. Available in versions for single, two and four-family homes, the "**Villa**" **design external units** exhibit an aluminium and glass frame with Sensitive Touch front, while the "**Vandal-proof**" **models** are characterized by a robust and resistant metal structure.

Technology and design with aluminium are enhanced behind the AVE brand. The possibilities expand, allowing you to create cutting-edge solutions, where the electrical system, home automation and video intercom systems combine to enhance any technological mood.
